(54) Title: CATHODOLUMINESCENT GAS DISCHARGE DISPLAY

(57) Abstract: The invention relates to a cathodoluminescent gas discharge display having a reversed plasma direction, wherein secondary electrons (e-) generated by the impact of plasma ions (I+) on a cathode (5) are used to excite a luminescent substance (6). An advantage of the invention is that the ion feedback flow is reduced, which implies the application of a higher acceleration voltage and consequently a higher luminous efficacy.
